

Damian is dying, please help!

Damian Markham is the most adorable 2-year-old and has a wave for everyone he sees! He is also a fighter. Damian is battling a devastatingly fatal genetic disease called Acid Sphingomyelinase Deficiency (ASMD), aka Niemann-Pick Disease Type A. Damian is currently not expected to live to his 5th birthday.

But treatment is on the horizon! And with a surge in funding & public awareness, we can fast-track the clinical trial that could potentially save Damian's life and the lives of ALL babies affected by this disease! Damian is the bravest & sweetest little boy, but he is growing weaker every day. Your help with saving Damian is **IMMENSELY APPRECIATED.**
